

Exercise: My User Studies (part 1)

Uploading your own dataset

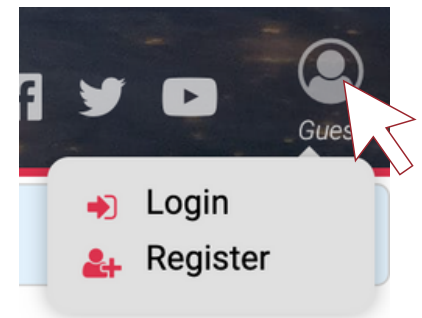

ClinEpiDB allows you to upload your own simple datasets and explore them using the tools on the platform. In this exercise, we will create a ClinEpiDB account and learn to upload a test dataset about malaria. We will explore this dataset in Part 2 towards the end of the workshop.

1. Log in or register for a free ClinEpiDB account. To create a ClinEpiDB account:

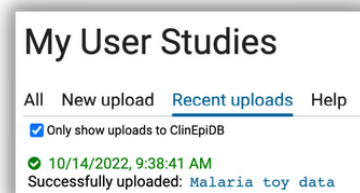

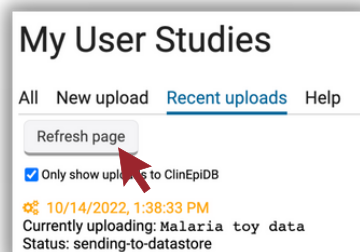

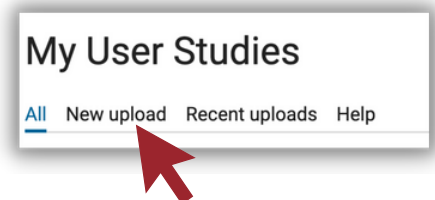

- Hover over the icon labeled **Guest** in the top right-hand corner, then click **Register**
- Fill out the form and click the **Register** button
 - Under **Preferences**, check the ClinEpiDB box to receive a newsletter every 2 months about new data, features, workshops, webinars, etc.
- A green text box should appear, indicating successful registration
- Check your email to retrieve your temporary password

Note: You only need one account for all VEuPathDB websites

2. Upload data

- Get the test dataset to upload from <https://bit.ly/3CIBnQN>
- From the **Workspace** menu, click **My User Studies**
- Click the **New Upload** tab at the top of the page
- Give the dataset a name and short summary. Add a longer description if you like
- Click **Choose File** to add the test dataset file
- Click **Upload Data Set**
- You will automatically be redirected to the **Recent uploads** tab. Refresh the page. Once the yellow icon and text turn green, the first part of your upload is complete

If you have another data file you would like to try uploading, go ahead and try it. Data is completely secure in our system and only you will have access. You can also delete it at any time.
